

Mathew Musango Peter

Senior Platform Engineer · Tech Lead, Platform Engineering | Kubernetes · Cloud · DevSecOps · Observability

Email | [LinkedIn](#) | [Portfolio](#) | Nairobi, Kenya

Professional Summary

With over ten years in IT, I'm currently the Deputy IT Manager at Eclectics International, leading the teams that run enterprise infrastructure, cloud transformation, and security operations in PCI-DSS compliant environments. My work spans hybrid cloud platforms, Kubernetes, virtualization with Microsoft Hyper-V, and automation — always aimed at keeping IT operations scalable and secure for a diverse set of clients.

At Eclectics, my focus is on weaving security and compliance into CI/CD pipelines, building centralized observability platforms, and designing disaster recovery strategies that reduce operational risk. I care about operational excellence, service reliability, and continuous improvement — and about making sure technology decisions serve business goals and deliver real impact.

Core Competencies

- **Platform Engineering and Cloud:** Kubernetes, Docker, Helm, Cilium, Cni, Cri, Harbor, Directpv, Metallb, Aws, Gcp, Azure, Direct connect, Security groups, VPC, EC2, S3, RDS, ECS, Terraform, Ansible, Gitlab, Git, Argo cd, Jenkins, Gitlab ci, Sonarqube
- **Systems and Networking:** Linux, Centos, RHEL, Ubuntu, SUSE, Rocky Linux, Red Hat, Windows server, Kvm, VMware, Vmware vSphere, Microsoft hyper-v, LVM, NFS, SELinux, Nginx, Apache, Pfsense, BGP, OSPF, STP, VPN, DNS, DHCP, SNMP, IDS/IPS, VLANs, TCP/IP, Load Balancing
- **DevSecOps and Security:** Wazuh, Trivy, Clair, SIEM, Hashicorp Vault, CIS Hardening
- **Monitoring and Reliability:** Prometheus, Grafana, Loki, Tempo, Mimir, Opentelemetry, Nagios, Icinga, Elk stack, Incident management, SLO/SLA, Distributed tracing
- **Databases and Data Platforms:** Postgresql, Redis, Mysql, MongoDB
- **Programming Languages and Scripting:** Bash, Python
- **Artificial Intelligence and Future Technologies:** Llm, CUDA
- **Management Skills and Strategy:** Team management, Budgeting, Infrastructure management

Professional Experience

Deputy IT Manager

Eclectics International *April 2021 – Present*

- Led DevOps and Systems Engineering teams across multiple regions, establishing infrastructure strategy and operational governance

- Architected and maintained hybrid cloud infrastructure using Kubernetes, high availability, and autoscaling
- Created an observability platform using Prometheus, Grafana, Loki, and OpenTelemetry monitoring 200+ servers
- Incorporated security and compliance into CI/CD pipeline; PCI-DSS compliance was achieved
- Formulated disaster recovery and business continuity plans, cutting RTO from 24 hours to 4
- Created multiple region Kubernetes clusters with auto-healing and load balancing capability
- Standardized the CI/CD process and platform automation, cutting deployment time by 60%
- Cut incident response time by 40% through proactive monitoring dashboards and runbooks

Senior System Administrator

Eclectics International *January 2019 – March 2021*

- Managed the Linux and Windows corporate infrastructure environment and performed centralized monitoring and alerting.
- Conducted CIS hardening, PCI DSS compliance, and security framework implementation.
- Improved system performance, availability, and reliability through tuning and automation.
- Worked with developer teams to enhance deployment procedures and application performance.
- Developed monitoring dashboards for real-time visibility.
- Decreased incident resolution time and improved system availability.

System Administrator

Eclectics International *October 2017 – December 2018*

- Day-to-day operations on Linux and Windows servers and managed firewall policies and networks.
- Assisted in PCI DSS compliance and infrastructure security.
- In charge of writing operational documentation and member of incident response team.
- Helped to ensure system availability and was also involved in initial automation processes.

ICT Technician

Kenya Marine and Fisheries Research Institute (KMFRI) OFFICIAL *June 2015 – September 2017*

- Configured and troubleshooted peripherals and network cables
- Offered technical support for desktops and hardware

Major Projects Done

- **DevSecOps Environment Setup:** Set up the entire DevSecOps environment including Mimir, Loki, Tempo, Harbor, GitLab, Artifactory, SonarQube, Selenium, Kroki, Argo CD, Jenkins, and Grafana.
- **Client Infrastructure to AWS Migration:** Led in migrating client's infrastructure from the on-premises to AWS through designing and setting up optimized cloud architecture leading to improved performance, saving costs, and efficient disaster recovery solution.
- **Deployment of Kubernetes Environment:** Managed to deploy Kubernetes environment using ingress controllers, DirectPV, MetalLB, and MinIO NFS provisioner for scalable and highly available application.

- **Deployment of Enterprise-wide Monitoring:** Deployed enterprise monitoring environment by using Grafana, Mimir, Loki, and Zabbix for system monitoring and logging on 200+ servers.
- **PCI-DSS Deployment:** Deployed internal custom policies and CIS hardening standards in order to achieve PCI-DSS compliance standards.
- **BCP Implementation:** Made use of Veeam Backup and Replication product to achieve virtual machine replication to Disaster Recovery site and on-site backup.
- **Migration of Email Services:** Migrated email services from G Suite to Microsoft 365. The whole process went smoothly and securely without loss of any information.
- **Environment Setup for Monitoring:** Set up monitoring environment using tools like Grafana, Mimir, Loki, Wazuh, and Zabbix.
- **Wikimedia Setup:** Created a Wikimedia environment to help users exchange information easily.
- **Scalable Kubernetes Environment:** Created a scalable Kubernetes environment using MetalLB, DirectPV, and MinIO.
